

Endpoint protection & response: Core EDR — agents on every managed device

Core

Next-gen AV + ML prevention

Pre-execution ML scoring, signature-less detection, polymorphic malware blocking before detonation

Core

Behavioural detection & prevention

Continuous process telemetry, MITRE ATT&CK-mapped rules, real-time blocking of anomalous behaviour chains

Gov-critical

Fileless & in-memory attack prevention

AMSI integration, reflective DLL injection detection, process hollowing, living-off-the-land (LOLBAS) blocking

Gov-critical

Endpoint isolation & network containment

One-click network cut-off retaining C2 channel back to console; remote site containment without physical access

Gov-critical

Live response & remote remediation

Remote shell, file retrieval, process kill, registry edit, memory dump — all from central console across 200+ sites

Gov-critical

Ransomware detection, rollback & vaccination

Canary file detonation, shadow copy protection, automated rollback of encrypted files, decoy-based deception

Core

Exploit & memory protection

CFG, DEP, ASLR enforcement; heap spray detection; stack pivot and ROP chain blocking; kernel exploit prevention

Core

Script-based attack detection

PowerShell, WScript, Bash, Python, VBA, macro analysis — AMSI hooks at runtime, obfuscation deobfuscation engine

Gov-critical

USB & removable device control

Per-device allow/block/read-only, vendor/serial granularity, audit trail, remote exception workflow, encrypted USB enforcement

Core

Hash-based IOC blocking

Auto-import of threat intel IOC feeds, SHA-256 blacklist/whitelist, custom hash policy with version tracking

Core

Agent tamper protection

Kernel-level self-protection, anti-uninstall, driver protection, rollback-resistant agent updates, health heartbeat

Gov-critical

Offline protection & remediation

Local ML models, cached policy, queued actions execute on reconnect — full protection during VPN/internet outage

Core

Deep telemetry (process, file, network, registry)

Full process tree, file create/modify/delete, network socket, registry change — 30–90 day searchable history

Gov-critical

Server EDR (Windows + Linux)

Lightweight kernel sensor for servers, workload-aware tuning, container/VM visibility, privileged process monitoring

Identity protection & privilege control: Credential, access, and escalation defence

Gov-critical

Credential dumping prevention

LSASS access monitoring, mimikatz/DCSync/pass-the-hash/pass-the-ticket detection, NTLM relay blocking

Gov-critical

Privilege escalation detection

Token impersonation, UAC bypass, sudo abuse, SeDebugPrivilege misuse, scheduled task privilege abuse alerts

Gov-critical

Identity threat detection & response (ITDR)

AD/Entra anomaly detection, golden/silver ticket attacks, Kerberoasting, brute force, impossible travel alerts

Core

MFA & conditional access enforcement

Risk-based MFA trigger, device posture check, location-based policy, session token theft detection

Gov-critical

Privileged access management (PAM) integration

Just-in-time privilege, admin account monitoring, privileged session recording, lateral movement from admin accounts

Emerging

Service account & NHI monitoring

Non-human identity (API keys, service accounts, tokens) anomaly detection, over-privileged account alerts

Network detection & XDR correlation: Cross-source signal fusion, east-west, C2

Gov-critical

C2 & beacon detection

DNS tunnelling, DGA domain detection, HTTPS C2 decryption, periodic beacon pattern analysis, encrypted C2 over TOR/CDN

Gov-critical

Lateral movement detection

SMB/WMI/RDP anomaly, pass-the-hash spread, network share enumeration, service installation across hosts

Core

Network traffic analysis (NDR/NTA)

East-west traffic baselining, protocol anomaly, data exfiltration detection, IoT/OT/unmanaged host visibility

Core

Web reputation & URL filtering

Real-time URL categorisation, drive-by download blocking, typosquatting/lookalike domain alerts, SSL inspection

Core

DNS security & sinkholing

Malicious domain blocking, DNS-over-HTTPS inspection, recursive query anomaly, DNS-based exfiltration prevention

Gov-critical

Zero Trust network access (ZTNA)

Application-level micro-segmentation, device posture gate, continuous session re-evaluation replacing legacy VPN

Email & collaboration security: Phishing, BEC, tender fraud, attachment threats

Gov-critical

Anti-phishing & BEC detection

Display name spoofing, lookalike domain detection, executive impersonation alerts, vendor email compromise

Gov-critical

Attachment sandboxing & detonation

Zero-day attachment execution in cloud sandbox, macro analysis, PDF exploit detection, password-protected archive unpacking

Core

URL rewriting & time-of-click protection

All email links proxied through reputation engine, re-evaluated at click time to catch delayed weaponisation

Core

DMARC / DKIM / SPF enforcement

Sender authentication enforcement, spoofed domain blocking, outbound policy compliance for government domain

Gov-critical

Tender & financial fraud email detection

NLP-based urgent payment request detection, anomalous bank detail change alerts, document tampering signals in attachments

Emerging

Mailbox takeover detection

Behavioural baseline per user, anomalous forwarding rule alerts, impossible travel logins, OAuth token abuse

Gov-critical

Outbound email DLP

Content inspection, sensitivity label enforcement, bulk recipient alerts, classified document exfiltration blocking

Data protection & DLP: Classification, leakage prevention, encryption

Gov-critical

Automated data discovery & classification

AI-powered scan of structured/unstructured data, sensitivity label auto-application, PII/financial/tender document tagging

Gov-critical

Endpoint DLP (print, copy, USB, screenshot)

Block/alert on sensitive data copy to USB, print, clipboard, screenshot — policy by label, content, or user group

Core

Network DLP & cloud DLP (CASB)

Inspect data uploads to cloud apps, SaaS data movement policies, shadow IT detection, unsanctioned app blocking

Core

Data-in-transit encryption enforcement

TLS 1.3 enforcement, SSL inspection, certificate pinning violation alerts, unencrypted protocol blocking

Gov-critical

Information rights management (IRM/MIP)

Persistent label-based encryption that travels with the document — controls view/edit/print/forward regardless of location

Gov-critical

Insider threat detection

User behaviour analytics (UEBA), mass download/deletion alerts, after-hours access anomalies, resignation-pattern triggers

AI security & threat intelligence: Generative AI risk, predictive detection, nation-state intel

AI

Predictive machine learning engine

Cloud + on-sensor ML models for zero-day prediction, model versioned and silently updated, attack chain scoring

Emerging AI

AI bot & GenAI application control

CASB-enforced block/allow/audit of ChatGPT, Copilot, Gemini usage; prompt injection detection; data submitted to LLMs DLP

Core

Threat intelligence platform (TIP) integration

STIX/TAXII feeds, ISACs, dark web monitoring, nation-state campaign tracking, automatic IOC operationalisation

Emerging

External attack surface management (EASM)

Continuous internet-facing asset discovery, exposed credential monitoring, government domain dark web scan

AI

AI-assisted alert triage & investigation

Natural language investigation, automated root cause analysis, AI-generated incident summaries, false positive suppression

Emerging

Deception technology & honeypots

Fake credentials, decoy files, honey-tokens for tender docs and financial data — instant high-confidence attacker detection

Cloud, SaaS & OT/IoT visibility: Hybrid government infrastructure coverage

Core

Cloud security posture management (CSPM)

Misconfiguration detection across AWS/Azure/GCP, compliance mapping to CIS/NIST, auto-remediation workflows

Core

Cloud workload protection (CWPP)

Container runtime protection, Kubernetes admission control, serverless function monitoring, cloud-native EDR agent

Gov-critical

CASB — SaaS data & access control

Shadow IT discovery, sanctioned/unsanctioned app policy, OAuth grant visibility, SaaS misconfiguration (SSPM)

Gov-critical

IoT/OT & agentless device discovery

Passive network discovery of cameras, printers, SCADA, BAS — risk scoring and network segment policy without agents

Emerging

CNAPP (cloud-native application protection)

Unified CSPM + CWPP + CIEM + CDR — full cloud application threat lifecycle from code to runtime
